

# Alex D'agostino Aleksandrov - IoT Developer

---

## About Me

I've been captivated by the world of IoT for years - fascinated by the silent conversations happening behind the scenes between devices, microservices, and infrastructure. I love building the invisible layers that bring everyday products to life.

## Professional Experience

### Phasefour, Eindhoven, NL

February 2024 - March 2024

#### Mobile Application Developer - Salvo Geotracking Solutions

- Developed a **battery-efficient** user tracking app using client-side geofencing (**Swift, SwiftUI, SQLite, iOS**).
- Achieved **less than 10% daily battery consumption** while maintaining reliable background operation.
- Quickly prototyped and optimized **under a tight 1-month deadline**.

### Phasefour, Eindhoven, NL

March 2024 - April 2024

#### Full Stack Developer - Salvo Geotracking solutions

- Created a **geofence drawing tool** and project organization platform using **C#, ASP.NET**, Azure services and **React**.
- Enabled **near-instant geofence suggestions** based on historical data and user location.
- **Automated geofence loading and project creation workflows** for users.

### Phasefour, Eindhoven, NL

April 2024

#### Full Stack Developer - Frijado Proof of Concept

- Designed and built a **POC that led to client acquisition**, incorporating:
  - **React UI** and **Express** backend simulating IoT devices
  - **ASP.NET** backend with Azure services such as **IoT Hub, Cosmos DB, Blob Storage, Event hub, Tables**

### Phasefour, Eindhoven, NL

May 2024 - January 2025

#### Full Stack Developer - Frijado

- Delivered a full-featured **real time IoT dashboard** using **C#, ASP.NET, React18, Microsoft EntraID, MSSQL**.
- Features included **device onboarding, monitoring, custom rule engine, application insights**, and secure auth via Entra ID.

## CGM Consulting, Turin (Sense Reply / Gridspertise)

February 2025 - Present

### Backend Developer

- Working on distributed system architecture with technologies such as **Go, Rust, Wasm, Dapr, Openshift** and many more.
- Key contributions:
  - Developed and deployed **Twelve Factor Applications**
  - Designed an **Observation API** integrating with **InfluxDB** and **MongoDB**
  - **Removed technical debt** through refactoring or full rewrites
  - **Reduced CPU usage by 10x and RAM by 15x** across multiple microservices
  - **Added comprehensive documentation and OpenAPI/AsyncAPI specifications**

## Open Source Contributions

I actively improve tools I use daily, including:

- [vscode neovim](#)
- [dapr](#)
- [ascanius config library](#)

## Education

**Liceo Classico Antonio Canova, Treviso** 2016 - 2021

**Technical University of Eindhoven (TU/e)** 2021 - 2023 Bachelor of Computer Science

## Languages

- **Italian (Native)**
- **Serbian (Native)**
- **English (Academic)**
- **Spanish (Conversational)**
